- Angular 5+
- Vuejs
- JQuery
- Express
- Bootstrap
- CSS
- Joomla
- WordPress
- MySQL
- Postgres
- MongoDB
- HTML
- Amazon Web Services
- CI / CD

EXPERIENCE

Software Engineer

February 2022 - Present

Opportune LLP

- Created from scratch a front end UI for a product that we are in the process of implementing at CITGO. The purpose is to provide a much easier way to display errors across all of their different groups that allows for more timely resolutions.
- Working with a team of 4 developers, but part of a larger group with business consultants and managers that are coordinating with the client so that we can provide them exactly what they need and we execute.

Software Engineer

January 2021 - February 2022

QuiAri

- Work on fixing bugs as well as adding new features to the live meetings and web chat applications that gets used by hundreds of thousands of people all over the world
- Create and update a website for an energy shake company. It is an MLM company so the website is e-commerce related and allows promoters to sign up new people as well as order more supplies. We also maintain the admin site that displays all of the data across all of the promoters and customers.

Software Engineer

September 2019 - December 2020

EOG Resources

- Working with a team of developers on two different high priority applications. Daily stand-ups and weekly meetings with Business Analysts showing our progress and what we are working on next.
- Responsible for getting with the Business Analysts and finding out the requirements for the screens I need to build. Constantly working with them to figure out the best way to display the data and create a smooth user experience.

Software Engineer

April 2017 - June 2019

7Factor

- Worked on creating a booking system for a trash removal startup. We used React on the front-end to allow users the ability to go through the booking flow from their phone or computer and select what items they had for removal. Then someone else could accept that and go pick it up and earn money.
- Used React to build and maintain a website for a company that allows companies have their employees sign up and receive things such as massages, yoga classes, etc. on site.
- Built out a website in Angular for a company who provides a service for District Attorneys and court-houses to keep track of people who are on currently parole and have a certain number of hours and a time frame to complete those hours.
- Recently was on a team of 3 using Vuejs to build a cost analysis tool for a top four airline. This website allowed them to be able to get detailed reports and visualize in a much easier way than previous. so they could make calculated decisions on when to pull engines for maintenance.
